

CRATES

Crates and heavy-duty skids case for in-transit protection against shock and vibration

We use mil-spec and ASTM standards as the quality baseline for all our wooden shipping crates and heavy-duty skids.

We'll then further customize to accommodate the specialized material handling, loading and unloading, blocking and bracing, and shock and vibration protection requirements of a customer's product. This might include floater bases and foam lining or supports, or specialty hardware, blocking, and ramps to facilitate reuse or loading.

In doing so, our engineers collaborate closely with you to assess your requirements, and design a crate that caters to the size, weight, shape, fragility, sensitivity, and destination of the item to be shipped.

All of our wooden shipping crates are ISPM-15 compliant, heat-treated and appropriately marked for export.

- ✓ Shock mount and vibration protective floater bases 
- ✓ Built-in ramps and hinged doors 
- ✓ Tool-less and re-useable options 

Heavy-duty Skids

Large, heavy equipment requires specialty skids for safe, damage-free lifting and transportation.

We know how to work with larger timbers, and have the specialty hardware required to manufacture skids that account for equipment weight, weight distribution, center of gravity, handling environment, blocking and bracing, and appropriate stiffness and rigidity.

Floater Bases

Products sensitive to shock and vibration require additional protection, both to secure it in place while shipping, and to mitigate the damaging effects of supply chain handling. We can suggest and engineer dampeners out of specialty foams that will meet the shock and vibration protection needs of your product.

Our crate and heavy-duty skid specialities

- ✓ Floater base with risers
- ✓ Floater base with rails
- ✓ Full cavity foam linings
- ✓ Toolless rack crates with built-in ramps
- ✓ Toolless rack crates with removable covers
- ✓ Bolt-down crates with hinged doors
