Our ongoing commitment to sustainability

Why our reusable rack crate solutions are good for both your bottom line and the planet

Often better than hybrid corrugated solutions!

Consider what a typical corrugated crate system actually involves: J-panels, coral clips or straps, design style trays (DST), additional corrugated dunnage, and foam padding — all assembled around a bulky rack that could weigh up to **1,500-3,000 lbs.** Once it reaches its destination, all that material is immediately discarded.

Meanwhile, **reusable rack crates** are built to make that same journey again and again.

Over the years, we've invested a lot of work in optimizing our **rack crates** for superior performance, sustainability and reusability. This singular focus is why they last the distance for our customers and can make the same journey, transporting 42-52U server racks back and forth across the USA, over and over again.

Our reusable rack crates have saved 572 lbs per crate shipment of waste from going straight to landfill for one customer compared to using a one-way disposable corrugated solution with a wood base — and more than 22 million pounds over the life of our business relationship.

REUSABLE & TOOLLESS CRATES

In 2013 we were one of the first to develop reusable crates that could be used more than five times before needing replacement. At the same time, we implemented toolless options that sped up loading and unloading, and improved ease of recyclability by eliminating the need for many (if not most) screws and bolts.

2013

RECYCLING

Then in 2019 we modularised the crates base and cap so that individual crate parts could be easily separated for recycling.

2019

REPLACEABLE FLOATERS

And in 2024 we started using replaceable cartridge style internal floaters for crates bringing usable crate life up to 10 trips at only 1.5x the nominal cost.

2024

Smart. Packaging. Fast. Guaranteed!
